PROJECT VACANCY AND TRAVEL DESK DASHBOARD

SYNOPSIS

Name: Gokulnath K

Reg.No: 117014022

Project Guide: Manikandan Kathireson

Location: iNautix Technologies India Private Limited

ASP.Net MVC used in this application is one of the dotnet technologies for creating a web based application. The Model part of the application that is responsible for the core application or business logic, the View is the is a user interface and it displays data from the model to the user and also enables them to modify the data and the Controller is the process incoming requests, handle user input and interactions and execute appropriate application logic.

The ultimate aim is to develop a Project Vacancy application will be effective for notifying project allocation to all registered employees and a Travel Desk dashboard will be powerful for the employees working in the company.The technologies used in this project are ASP.NET, Angular JS, Bootstrap, JavaScript, and jQuery. The JSON object is used to communicate with the client.

The existing dotnet application is a simple dotnet based web application. The further implementation of ASP.Net MVC is used to eliminate the dependencies and provide a user application for the employees with the help of Web-API. Responsiveness and Customizable application which is developed in the bootstrap framework serves the need for effective user interface and proper interaction with the computer.
